

There are total 60 questions in this Test Booklet. Each question is having four alternative responses, of which one response is completely correct. Record the completely correct response on the OMR sheet by darkening the corresponding circle with Blue/Black ball point pen only.

1. In discussion of Catastrophism, a term associated with geomorphology, identify which of the following combinations of events are correct.

 - a) Floods
 - b) Erosions of landscape
 - c) Earthquakes
 - d) Volcanic eruptions

(A) a, b and c (B) a, b and d
(C) a, c and d (D) b, c and d
2. Thermal convection current theory of Arthur Holmes explains

 - I. The origin of major relief features of earth's surface.
 - II. Helps to consolidate understanding of the continental drift theory

(A) Statement I is correct
(B) Statement II is correct
(C) Both the statements I and II are correct
(D) Both the statements I and II are not correct
3. A braided river has the following characteristics compared to a meandering river of similar discharge

 - a) Wider and shallower
 - b) Transports high sediments load
 - c) Erodes riverbanks rapidly,
 - d) Deeper

(A) a, b and c are correct (B) a, b and d are correct
(C) a, c and d are correct (D) b, c and d are correct

4. The concept of Isostasy and Eustasy are involved with
- Lighter crust must be floating on denser underlying mantle
 - a change of sea level throughout the world, is caused typically by movements of parts of the earth's crust or melting of glaciers.

Which of the two changes are independent from local factors?

- (A) I only (B) II only
(C) Both I and II (D) Both are dependent on local factors
5. Valley deepening takes place primarily during the youthful stage of a river.
- Valley deepening could go to the extent of base level erosion
 - Base level remains the same in all physiographic conditions
- (A) Statement I is correct (B) Statement II is correct
(C) Statements I and II are correct (D) Statements I and II are not correct
6. One of the following four statements related to climate change in India is not correct; identify the correct combination.
- There is evidence of warming of Indian Ocean
 - India's average temperature has risen by 4°C during 1901–2018.
 - There is variation in summer monsoon
 - Rising frequency of frequent dry spell
- (A) a, b and c are correct (B) a, b and d are correct
(C) a, c and d are correct (D) b, c and d are correct

7. Rainfall received due to western disturbances in North-western India could be beneficial for
- Paddy
 - Sugarcane
- (A) Statement I is correct (B) Statement II is correct
(C) Statements I and II are correct (D) Statements I and II both are not correct.

8. Layer of atmosphere in which Ozone layer lies is stratosphere
- The lower edge of the stratosphere remains not the same across the latitudes of the earth
 - Commercial airliners attempts to fly through stratosphere to optimize fuel efficiency
- (A) Statement I is correct (B) Statement II is correct
(C) Statements I and II both are correct (D) Statements I and II are not correct
9. Gulf stream an ocean current that moderates temperature of neighbouring land areas of
- East coast of North America
 - Coasts of western Europe
 - North-western Africa
 - Gulf of Iran
- (A) a, b and c are correct (B) a, b and d are correct
(C) a, c and d are correct (D) Only d is correct
10. The impact of cyclones and tsunamis in India could be reduced by
- Presence of tropical deciduous forest
 - Presence of tropical thorny and scrubs forest
 - Presence of mangrove forests
 - Presence of montane forest
- (A) Only statement (a) is correct (B) Statements (a) and (b) are correct
(C) Statement (c) is correct (D) All statements are correct
11. A place of constant intermingling of fresh water and salt water is called Estuary.
- Mangroves forests are found only in estuaries
 - Estuaries are among the most productive water ecosystems in the world
- (A) Only statement I is correct (B) Statements I and II, both are correct
(C) Only the statement II is correct (D) Both the statements are not correct
12. Students of a college of Assam plans to study Moraines during the summer vacation.
- Students wish to go to Gujarat
 - Teachers wish to take them to a closer place in Mizoram
- Whose decision will be right
- (A) Students
(B) Teachers
(C) Travel costs and time required to visit may be different, but both the decisions would yield same outcome on academic front
(D) Teachers and students are not taking the right decision

13. Which of the following measures would help to enhance carrying capacity of a region or state
- Raising agriculture productivity
 - Remittance by citizen migrating out for job
 - Grant -in Aid from external agencies
 - Immigration of people
- (A) Only measure (a) would help (B) Measures (a) and (b) would help
(C) Measures (a), (b) and (c) would help (D) All measures would help
14. BT (*Bacillus thuringiensis*) cotton is allowed to cultivate in India
- Because of its resilience to pest attack, and hence there is gain for farmers
 - Criticized and debated on IPR policy related factor and that not suitable to agro-climatic conditions in India.
- (A) Statement I is acceptable
(B) Statement II is acceptable
(C) Statements I and II both are acceptable
(D) Statements I and II both are not acceptable
15. Manufacturing of Compact Fluorescent Lamp (CFL) in India comes under Clean Development Mechanism (CDM) of the Kyoto Protocol. Consider the following statements and indicate the right options considering validity of the statements.
- CFL lamp is energy efficient
 - CFL lights are hazardous because of its mercury content
- (A) Policy option will be to encourage CFL lamp production if statement I is true
(B) Policy option will be to discourage CFL lamp production if statement II is true
(C) Policy option to find ways out to ensure efficiency and mitigate hazard factor
(D) Both the statements are trivial
16. Which of the following economic activity is discussed and considered as ecologically suitable for Northeast India ?
- Rubber plantations
 - Palm oil plantations
 - Shifting cultivations
 - Rat-hole coal mining
- (A) (a) and (b) (B) (b) only
(C) (c) only (D) All four

17. To locate a manufacturing activity which of the following combinations of factors need to be available locally

- a) Raw materials, power, labour, capital
- b) Land only
- c) Industrial policy and capital only
- d) All of the above

(A) Only (a) is required

(B) Only (b) is required

(C) Only (c) is required

(D) Statement (d) is correct

18. Mizoram state, has adopted a New Land Use Policy to create opportunities for farmers beyond hill agriculture in pursuit to prevent deforestation – what one would be the most likely and immediate outcome among the following –

- (A) Rise in income of the rural households
- (B) Rise in proportion of rural non-agricultural workers
- (C) Prevent deforestation of hills and mountain areas
- (D) All of the above three

19. The reason of Northeast region of India emerging as a hub of rubber production in India is

- a) Congenial physiography and climate
- b) Initiative of rubber board of India
- c) Have abundant open land for rubber
- d) A ready market for raw rubber in the region

(A) Only statement (a) is correct

(B) Only statement (b) is correct

(C) Statements (a) and (b) are correct

(D) All statements are correct

20. Which of the following statements are unlikely

- a) Population of India shall get doubled in every 35-40 years at annual growth rate of about 2 percent
- b) Food grains yield, and production shall keep pace with population growth rate at least for next few decades
- c) Per rural households' average availability of cultivable land will remain intact
- d) Technology will help to reduce generation of solid and liquid wastes at zero level

(A) All are unlikely

(B) (a) and (b)

(C) (b) and (c)

(D) (c) and (d)

21. The prime reason that contributed to population growth in India is high fertility rate. Approaches to bring down the fertility rate could be
- I. Emphasis on health and social sectors development
 - II. Emphasis on creation of enough and equal opportunities in employment for women
- The approaches indicated above can be evaluated as
- (A) I and II are direct measures of intervention
 - (B) I and II are indirect measures of intervention
 - (C) I and II are irrelevant measures
 - (D) I and II are contradictory in approach
22. A geography graduate ventures into a retail business and is concerned to derive a minimum threshold income to sustain, drawing customers from a certain range. One of the following theories may often knock his mind.
- (A) Industrial location
 - (B) Von Thunen Model
 - (C) Concentric zone theory
 - (D) Central Place Theory
23. The method of mapping depends on the
- (A) Size of the area
 - (B) Degree of accuracy aimed at
 - (C) Amount of details required
 - (D) All of the above
24. The network of the parallels and meridians so formed in a map projection is called
- (A) Graticule
 - (B) Longitude
 - (C) Latitude
 - (D) Equator
25. A projection in which the correct shape of a given area of the earth's surface is preserved.
- (A) Homolographic Projection
 - (B) Orthomorphic Projection
 - (C) Azimuthal Projection
 - (D) Equidistant Projection
26. Which of the following are the examples of small scale maps?
- (A) Wall maps
 - (B) City plans
 - (C) Atlas maps
 - (D) Both (A) and (C)

27. An imaginary line drawn on a map joining all places with the same temperature
- (A) Isobars (B) Isotherms
(C) Profiles (D) Contours
28. Maize cultivation is rapidly expanding in the state of Assam. Which of the following crops farmers most likely to replace to cultivate maize?
- a) Wet paddy
b) Autumn paddy
c) Tea and rubber
d) Bamboo
- (A) (a) only (B) (b) only
(C) (a) and (c) (D) (c) and (d)
29. Agriculture practices of Apatani people of Ziro valley in Arunachal Pradesh is considered one of the highly energy efficient farming activities in India; the reasons being
- a) High output ratio to inputs used
b) Uses minimum inputs
c) have high input intensity
d) Uses power for irrigation
- (A) Only (a) is correct (B) Only (b) is correct
(C) Only (c) is correct (D) All are correct
30. Among the scales of measurements while framing a questionnaire one of the measurement scales does not involve any numerical value; the scale is
- (A) Nominal (B) Ordinal
(C) Interval (D) Ratio
31. To measure and compare consistency of distribution of rainfall in two places manually which of the following measures will be used in the process
- a) Arithmetic mean,
b) Geometric Mean
c) Standard deviation
d) Coefficient of variation
- (A) (a), (b) and (c) (B) (a), (b) and (d)
(C) (a), (c) and (d) (D) (b), (c) and (d)

32. In time and resource constraints situation, which of the following approach would help to find a close figure of school dropout of girls after primary level in a village having about 200 households?
- (A) Visit the village headman
 - (B) Visit the village primary school
 - (C) A systematic sample survey of the households
 - (D) A visit to the Anganwadi centre
33. To measure the outcome of expansion of irrigation provisioning on changes in food grain production which statistical methods would be appropriate
- (A) Correlation
 - (B) Gini Coefficient
 - (C) Regression analysis
 - (D) Geometric mean
34. The root cause of conflict in Middle East region is
- a) Poor level of human development
 - b) Weak governance
 - c) Poverty
 - d) In congenial environment for investment
- (A) Only statement (a) is correct
 - (B) Only statement (b) is correct
 - (C) Only statement (c) is correct
 - (D) All statements are correct
35. The prime factor for South Korea's growth in industrialization is
- (A) Abundant energy resources and raw materials
 - (B) Abundant labour
 - (C) Research and development in industrial sector
 - (D) All of the above
36. One of the Southeast Asian countries cropping pattern now see concentration of palm plantations for oil, which ends ecological and agriculture diversity
- (A) Malaysia
 - (B) Indonesia
 - (C) Philippines
 - (D) Vietnam

37. The scheduled languages of India fall in the following family/group of languages.
- Austic
 - Sino-Tibetan
 - Dravidian
 - Arawakan
- (A) Your answer is correct if from the given list only one group has scheduled languages
 (B) Your answer is correct if from the given list only two groups have scheduled languages
 (C) Your answer is correct if from the given list three groups have scheduled languages
 (D) Your answer is correct if from the given list all four groups have scheduled languages
38. A state show rise in percentage of area under desertification. This concern will fall under the UNDP's Sustainable Development Goal of
- Responsible consumption and production (Goal 12)
 - Climate Action (Goal 13)
 - Life on Land (Goal 15)
 - All of the above
39. The indicators considered by the UNDP to measure human development index are - Life expectancy at birth, mean years of schooling, expected years of schooling and gross national income per capita. The concerns and challenges raised on measurement of HDI are -
- Inequality, Gender, Environmental aspects are not considered
 - Non-availability of data and difficulty in measurement
- (A) Statement I is correct (B) Statement II is correct
 (C) Statements I and II are correct (D) Both the statements are not correct
40. Friedrich Ratzelis the author of 'Anthropogeographie'.
- The book considered population distribution, its relation to migration and environment, and the effects of environment on individuals and societies.
 - Ratzel's interest in tribes, races and nations and fieldwork had helped to coin the term 'anthropogeography'.
- (A) Only statement I is true (B) Only statement II is true
 (C) Both the statements are true (D) Both the statements are wrong

41. The term 'Social Darwinism'

- I. Is relevant in a welfare state
 - II. Its traits are observed in a welfare state like India
- (A) Only statement I is true (B) Only statement II is true
(C) Both the statements are true (D) Both the statements are wrong

42. The idealized model on development of relief in landscapes is associated with

- (A) W M Davis (B) A V Humboldt
(C) Yi-Fu – Tuan (D) Carl Ritter

43. One of the demerits of quantitative methods is we may lose sight on an individual observation and miss certain specific components of the observation due to the use of group average or generalisation. This demerit can be appropriately addressed by

- a) Addressing sampling error
 - b) Complementing with qualitative approaches of study
 - c) Adopting alternate statistical measures
- (A) Only through (a) (B) Only through (b)
(C) Only through (c) (D) All the three approaches will be required

44. Mark the odd one in discussion of dualism and dichotomies in geography

- (A) Systematic Vs Regional Geography (B) Ideographic vs Nomothetic
(C) Ecology and Ecosystem services (D) Physical and Human Geography

45. The Schaefer -Hartshorne Debate is related to

- (A) On dichotomy of determinism and possibilism
(B) the methodology of pursuing geographical studies
(C) the approach to climate change studies
(D) industrial locations in liberalised world

46. Charles Darwin's "The origin of Species, by means of natural selection or the Preservation of favoured races in the struggle for life, 1859", is considered as the foundation of evolutionary biology. Consider the following statements
- I. The idea of change and development through time strongly influenced the progress the field of geomorphology
 - II. The ideas and themes of selection and struggle are deterministically applied in political geography.
- (A) statement I is correct (B) statement II is correct
(C) statements I and II both are correct (D) both the statements are irrelevant.
47. To study a specific case, place, or a phenomenon the approach in geography would be Ideographic
- I. Descriptive and subjective experiences in explanations cannot be empirically tested
 - II. Hence ideographic approach cannot make valid contributions to the field of knowledge
- (A) Statement I is wrong (B) Statement II is wrong
(C) Statements I and II both are wrong (D) Statements I and II both are right
48. In India during 2001 to 2011 the number of Census Town showed rapid growth (increased by a total of 2500 in number) compared to the statutory towns (increased by around 250 in number). Rapid growth of census towns was because of
- a) Formation of municipal board/committee and notified town area committee, etc.
 - b) Rapid growth of population leading to cross the minimum requirement of 5000 inhabitants to qualify as a town
 - c) The town area become densely populated with more than 400 persons per square km
 - d) Three fourth of the male workforce found full time jobs in non agriculture activities
- (A) Statements (a), (b) and (c) are correct (B) Statements (b), (c) and (d) are correct
(C) Statements (a), (c) and (d) are correct (D) Only (d) is correct
49. Data on housing of Census of India 2011 confirms households in India have a permanent roof than the other two components of house – concrete floor and permanent wall. The most likely reason being
- (A) Governments under certain schemes provide free distribution of GI sheets, but not flooring and wall materials
 - (B) Financial constraints of the households
 - (C) To have protection from intense heat and precipitation
 - (D) It is choice of the people

50. The reason for closure of two public sector paper mills in Assam is
- (A) Lack of locally available raw materials (B) Lack of labour
(C) Intermittent power supply (D) Ineffective management
51. Which Forest is planted by a human being
- (A) Gir forest (B) Molai forest
(C) Niligiri Biosphere Reserve (D) Sacred Groves, Khasi Hills
52. In resource constraints situation of a state, which of the following approaches could help reduce impact of the floods
- (A) Monitor and manage watersheds of the rivers
(B) Map the floods prone areas with different intensity zones with technology available at present
(C) Construction of embankment
(D) Excavation of riverbeds
53. Percentage of rural households engaged in agriculture has declined rapidly in the state of Assam from about 80 percent in early 1990s to about 50 percent at present to the date of National Statistical Office of India. The prime reason could be
- (A) There are now enough opportunities in standard jobs beyond agriculture
(B) Agriculture is considered as not remunerative
(C) There is alienation of agriculture land in large scale
(D) Natural hazards affect the agriculture sector
54. A farmer test his soil of his field and finds pH factor at 8.0. Which of the following ventures would be rational for his to undertake?
- (A) Paddy (B) Vegetables
(C) Tea (D) Pisciculture
55. A farmer would break away from seasonal nature of agriculture; and cultivate a specific water intensive crop during non-monsoon season; if
- (A) there is subsidy for required agriculture inputs
(B) there emerges a remunerative market for the product
(C) massive infrastructure for cold storage is created for the farmer
(D) None of the statements would be appealing for the farmer

56. Toklai, a place (also a River) close to Jorhat town of Assam known for
- (A) Airport (B) Intensive rice cultivation
(C) Tea research (D) Fertiliser manufacturing
57. The disadvantages of generation of solar energy in India is
- (A) Space and availability of continuous sunshine
(B) High initial investment
(C) Maintenance and services
(D) All of the above
58. The factors that are creating problems of solid waste management in an urban space are
- (A) Lack of civic sense of the citizen
(B) Lack of market of waste
(C) Lack of stringent regulations from the municipal authority
(D) All of the above
59. A developing country like India is constrained to arrange financial resources to achieve sustainable development goals. One of the following UN conferences provided a new global framework for financing sustainable development.
- (A) Monterrey, Mexico in 2002 (B) Doha, Qatar in 2008
(C) Addis Ababa, Ethiopia in 2015 (D) Glasgow, 2021
60. The main objective of Universal Health Coverage (UHC) is
- I. to provide citizens access to health services without incurring any financial hardships
II. UHC is one of the 17 Sustainable Development Goals adopted by UN
- (A) Only statement I is correct (B) Statements I and II, both are correct
(C) Only the statement II is correct (D) Both the statements are not correct
