

There are total 60 questions in this Test Booklet. Each question is having four alternative responses, of which one response is completely correct. Record the completely correct response on the OMR sheet by darkening the corresponding circle with Blue/Black ball point pen only.

1. The term 'Social Darwinism'

A) Is relevant in a welfare state

(B) Its traits are observed in a welfare state like India

(A) Only statement A is true

(B) Only statement B is true

(C) Both the statements are true

(D) Both the statements are wrong

2. Mark the odd one in discussion of dualism and dichotomies in geography

(A) Systematic Vs Regional Geography (B) Ideographic vs Nomothetic

(C) Ecology and Ecosystem services (D) Physical and Human Geography

3. The Schaefer -Hartshorne Debate is related to

(A) On dichotomy of determinism and possibilism

(B) the methodology of pursuing geographical studies

(C) the approach to climate change studies

(D) industrial locations in liberalised world

4. Charles Darwin's "The origin of Species, by means of natural selection or the Preservation of favoured races in the struggle for life, 1859", is considered as the foundation of evolutionary biology. Consider the following statements

I. The idea of change and development through time strongly influenced the progress the field of geomorphology.

II. The ideas and themes of selection and struggle are deterministically applied in political geography.

(A) statement I is correct

(B) statement II is correct

(C) statements I and II both are correct (D) both the statements are irrelevant.

5. To study a specific case, place, or a phenomenon the approach in geography would be Ideographic

- I. Descriptive and subjective experiences in explanations cannot be empirically tested
- II. Hence ideographic approach cannot make valid contributions to the field of knowledge

(A) Statement I is wrong (B) Statement II is wrong  
(C) Statements I and II both are wrong (D) Statements I and II both are right

6. Which of the following statements are unlikely

- a) Population of India shall get doubled in every 35-40 years at annual growth rate of about 2 percent
- b) Food grains yield, and production shall keep pace with population growth rate at least for next few decades
- c) Per rural households' average availability of cultivable land will remain intact
- d) Research and Technology will help to ensure food grain availability for infinite time

(A) All are unlikely (B) a and b  
(C) b and c (D) c and d

7. India is a laggard in human development index prepared by the UNDP,

- a) A significant section of people of the country are excluded from the education and health care system
- b) Per capita GNP of country is low
- c) The country has intense economic inequality
- d) Gender inequality in the country is alarming

Which one of the following is correct

(A) a and b only (B) a, b and c  
(C) a, b and d (D) all of the above

8. The prime factors for rapid growth and development in industry, trade in goods and services sectors of countries like South Korea and Singapore are

- (A) Availability of abundant energy resources
- (B) Abundant skilled labour
- (C) Research and development
- (D) All of the above

9. One of the Southeast Asian countries cropping pattern now see concentration of palm plantations for oil, which ends ecological and agriculture diversity of the country. The country is

- (A) Malaysia  
(C) Philippines

- (B) Indonesia  
(D) Vietnam

10. To locate a manufacturing activity in the industrially backward region of northeast India for an external investor which of the following combinations of factors would be prime?

- a) Raw materials and power  
b) Land only  
c) De-regulations of the labour market  
d) All of the above

- (A) a is the prime factor  
(C) only c will be required  
(B) only b is the prime factor  
(D) statement d is correct.

11. What is/are the advantages/advantages of zero tillage in agriculture?

- a) Sowing of a crop say wheat is possible without burning the residue of the previous crop.  
b) Without the need for nursery of rice saplings, direct planting of paddy seeds in the wet soil is possible.  
c) Ensure carbon sequestration in the soil

Select the correct answer

- (A) a and b are correct  
(C) only c is correct  
(B) b and c are correct  
(D) all are correct

12. 'Ladang' is a local name of shifting cultivation practiced in:

- (A) Southeast Asia  
(C) Central America  
(B) Eastern Africa  
(D) Western Europe

13. Students of a college in Assam plan to study the diversified hill and mountain agriculture systems during the winter vacation in December.

I. The students wish to go to Tamil Nadu.

II. Teachers wish to take them to a closer place to Tawang in Arunachal Pradesh

Whose decision will be right -

- (A) Students  
(B) Teachers

(C) Travel costs and time required of the visits may be different, but both the decisions would yield same outcome on academic front

(D) Teachers and students are not taking the right decision.

- ✓ 14. The state governments of the Northeast region face serious challenges to accommodate their rising population pressure. Which of the following measures would help the state -
- a) Raising efficiency and market reach of the existing economic sectors
  - b) Encourage the citizens to move out for job
  - c) Seek Grant-in-Aid from Central Government external agencies
  - d) Invest adequately on health and education sectors
- (A) Only measure a would help      (B) Measures a and c would help  
(C) Measures a, b and c would help      (D) All measures would help
- ✓ 15. The reason/s of Northeast region of India is seen as an emerging hub of palm oil plantations is/are
- a) Congenial physiography and climate
  - b) Initiative of government of India
  - c) Have abundant open land for palm plantations
  - d) A ready market for palm oil in the region
- (A) Only statement a is correct      (B) Only statement b is correct  
(C) Statements a and b are correct      (D) All statements are correct
- ✓ 16. A student prior to going for field work looks for some empirical evidence to understand the trend of youth unemployment in India, in the post liberalization period. The evidence the student would get in -
- a) Data of Census of India
  - b) Data of National Statistical Office
- The answer would be -
- (A) a only
  - ✓ (B) b only
  - (C) Both a and b
  - (D) Both are not the sources of unemployment data

17. The constraints the developing countries to mitigate the adversities emerging from global warning are-

A) Intensive use of polluting technology and incapability to adopt clean processing and development mechanism due to lack of fund

B) Excessive consumption of goods and services by the population

(A) Both A and B are true, and B is the correct explanation of A

(B) Both A and B are true, but B is not a correct explanation of A

(C) A is true but B is false

(D) A is false but B is true

18. Malthusian theory in the late the 18<sup>th</sup> said that of population growth at some point of time would outstrip food supply and other resources; the point what would be called Malthusian catastrophe.

Consider the following statements-

a) Malthus failed to read the rapid stride of scientific and technological progress of his times and the future.

b) Finite, non-renewability and non-reproducibility of certain natural resources indicate that technology has a limit, and Malthus was not wrong.

c) Crises of present times - poverty, famine, war etc., indicate Malthus was right.

d) Malthus provided a useful construct to realise the limit of our world.

(A) only a is correct

(B) b and c are correct

(C) b, c and d are correct

(D) All are correct

19. Consider a country at the 4<sup>th</sup> stage of Demographic Transition to expand its emerging economy immediately would like to resort to

A) Encourage immigration of skilled workforce

B) Its population policy would provide liberal childcare leaves to its existing workers

(A) Approach A will be rational

(B) Approach B will be rational

(C) Both approaches will be rational

(D) Both approaches are irrational

- ✓ 20. In India during 2001 to 2011 the number of Census Town showed rapid growth (increased by a total of 2500 in number) compared to the statutory towns (increased by around 250 in number).

Rapid growth of census towns was because of

- a) Formation of municipal board/committee and notified town area committee, etc.
- b) Rapid growth of population leading to cross the minimum requirement of 5000 inhabitants to qualify as a town
- c) The town area become densely populated with more than 400 persons per square km
- d) Three fourth of the male workforce found full time jobs in beyond agriculture activities

- (A) Statements a, b and c are correct    (B) ✓ Statements b, c and d are correct  
(C) Statements a, c and d are correct    (D) Only d is correct

- ✓ 21. Manufacturing of Compact Fluorescent Lamp (CFL) in India comes under Clean Development Mechanism (CDM) of the Kyoto Protocol. Consider the following statements and indicate the right options considering validity of the statements.

- I. CFL lamp is energy efficient.
- II. CFL lamp is hazardous because of its mercury content.
- III. Energy efficiency of CFL bulb does not outweigh the high production cost involved.

- (A) Policy option will be to encourage CFL lamp production if statement I is true  
(B) Policy option will be to discourage CFL lamp production if statement II is true  
✓ (C) Policy option will be to limit power consumption to minimise economic and ecological burdens of power generation  
(D) Policy option to find ways out to ensure energy efficiency and hazard/ecology factor

22. Terrace cultivation of Nagaland is characterised by -

- a) Effective land management
- b) Effective water management
- c) High intensity of cropping

- (A) only a is correct  
(B) a and b are correct  
(C) a, b and c are correct  
(D) All are not correct as terrace cultivation is ecologically disastrous

23. Consider the following mode of cultivations
- Jhum or shifting cultivation
  - Alder based shifting cultivation
  - Terrace cultivation
  - wet paddy cultivation
- Only mode a is found in hill states of Northeast India
  - Mode a and b are found in hill states of Northeast India
  - Mode a, b and c are found in hill states of Northeast India
  - All mode found in hill states of Northeast India.
24. The states of India show significant rises in road and railway accidents in recent times. This concern will fall under the UNDP's Sustainable Development Goal of
- Good Health and Wellbeing (Goal 3)
  - Sustainable Cities and Communities (Goal 11)
  - Life on Land (Goal 15)
  - All of the above
25. To reduce urban heat island the government has gone for the following measures.
- Makes it mandatory to keep specific proportion of open space free from construction of buildings
  - Put heavy taxation on air conditioners
  - Provisioned heavy subsidy in green building materials among the measures
- a and b are appropriate
  - a and c are appropriate
  - b and c are appropriate
  - All are appropriate
26. ChapcharKut festival is celebrated by
- Ho Tribe
  - Apatani Tribe
  - Mizo Tribe
  - Adi Tribe
27. Which pair is not correctly matched?
- Viena convention: Protection of ozone layer
  - Stockholm convention: Release of greenhouse gases
  - Rotterdam convention: Hazardous chemicals
  - Basel convention: Hazardous wastes and their disposal

28. To construct and understand a cultural region which of the following component/s are considered.
- Cultural traits or elements
  - Cultural complex
  - Cultural system
- (A) a and b  
(B) a and c  
(C) b and c  
(D) All three
29. The first contact point between village community and a medical officer in Indian's health care systems is -
- The sub-centres
  - The primary health centres
  - The community health centres
  - district hospitals
- (A) The answer is a  
(B) The answer is b  
(C) The answer is a and b  
(D) The answer is all
30. The often reported rising intensities of the floods and damages in Assam said to have two explanations.
- The water flow has become sudden and high.
  - People have established settlements in low lying areas.
- (A) Only A is right  
(B) Only B is right  
(C) Both A and B are true and inclusive to explain the causes of rising intensity.  
(D) A and B not inclusive statements to explain intensity of floods
31. The concept of Isostasy and Eustasy are involved with
- Lighter crust must be floating on denser underlying mantle
  - a change of sea level throughout the world, is caused typically by movements of parts of the earth's crust or melting of glaciers.
- Which of the two changes are independent from local factors?
- (A) I only  
(B) II only  
(C) Both I and II  
(D) Both are dependent on local factors

32. Consider the following statements:

- a. Crystallization is a form of mechanical weathering.
- b. Hydration causes granular disintegration.
- c. Frost action is synonymous with freeze-thaw action.

Which of the statements given above are correct?

- ☒ (A) a and b only
- (B) b and c only
- (C) a and c only
- (D) a, b and c

33. Consider the following statements.

A: In the troposphere, temperature decreases with increase in altitude.

B: The tropospheric layer primarily gets heated by the shortwave terrestrial radiation.

- (A) Both A and B are true, and B is the correct explanation of A
- ☒ (B) Both A and B are true, but B is not a correct explanation of A
- (C) A is true but B is false
- (D) A is false but B is true

34. Consider the following statements.

A: In the higher layers of atmosphere where the air is pure, there is no condensation through the relative humidity exceeds 100 percent.

B: Water vapour needs a condensation nuclei or hygroscopic particulates to condense.

- (A) Both A and B are true, and B is the correct explanation of A
- (B) Both A and B are true, but B is not a correct explanation of A
- (C) A is true but B is false
- (D) A is false but B is true

35. Reflect on the following two statements-

A: Isotherms are closely placed in the Northern Hemisphere.

B: There is a much greater concentration of landmass in the Northern Hemisphere.

- (A) Both A and B are true, and B is the correct explanation of A
- (B) Both A and R are true, but B is not a correct explanation of A
- (C) A is true but B is false
- ☒ (D) A is false but B is true

✓ 36. The concept of biodiversity hotspots is given by:

- (A) F.P. Odum
- (B) Norman Myers
- (C) James Lovelock
- (D) Rachel Carson

✓ 37. Which of the following are the examples of small scale maps?

- (A) Wall maps
- (B) City plans
- (C) Atlas maps
- ✓ (D) Both wall and atlas map

✓ 38. The scheduled languages of India fall in the following family/group of languages.

- a) Austric,
- b) Sino-Tibetan
- c) Dravidian
- d) Arawakan

- ✓ (A) Your answer is correct if from the given list only one group has scheduled languages
- (B) Your answer is correct if from the given list only two groups have scheduled languages
- (C) Your answer is correct if from the given list three groups have scheduled languages
- (D) Your answer is correct if from the given list all four groups have scheduled languages

✓ 39. In resource constraints situation of a state which of the following approaches could help reduce impact of the floods

- ✓ (A) Monitor and manage watersheds of the rivers
- (B) Map the floods prone areas with different intensity zones with technology available at present
- (C) Construction of embankment
- (D) Excavation of riverbeds

✓ 40. A student plan to conduct a study on happiness derived from participating a philanthropic activity. How would you capture value the happiness of the people participating in the activity?

- (A) Would go for nominal scale of measurement
- ✓ (B) Would go for ordinal scale of measurement
- (C) Would go for both
- (D) Would look for an appropriate scale of measurement

41. The term Uniformitarianism in geomorphology suggests -

- Earth's geologic processes have been in the same intensity as in the past the Earth had
  - Present day geologic events are considered as a window to the past events
  - Catastrophic processes are responsible for the landforms that existed on the Earth's surface
  - The long history of the Earth could be interpreted in terms of processes currently observed
- Which one of the following combinations is correct

(A) a, b and c

(B) a, b and d

(C) a, c and d

(D) b, c and d

42. The erosional cycle model of Penck, disagreed on the sequential process of the three components of Davis- the structure, process, and stages. To Penck,

- a) A sequential process of landform may be interrupted by rejuvenation.
- b) The interruption is from exogenous force
- c) The erosion cycle is a never-ending process.
- d) The erosional cycle is not time-dependent

Which one of the following is right

(A) a, b and c

(B) a, b and d

(C) a, c and d

(D) b, c and d

43. A braided river has the following characteristics compared to a meandering river of similar discharge

- a) Wider and shallower
- b) Transports high sediments load
- c) Erodes riverbanks rapidly,
- d) Deeper

Which one of the following combinations is correct

(A) a, b and c are correct

(B) a, b and d are correct

(C) a, c and d are correct

(D) b, c and d are correct

44. Read the following statements

A: The atmosphere is said to be conditionally unstable when the Lapse rate is between the DALR and SALR

B: The wet (saturated) adiabatic lapse rate is always greater than the dry adiabatic lapse rate.

The solution is -

(A) Both A and B are true, and B is the correct explanation of A

(B) Both A and B are true, but B is not a correct explanation of A

(C) A is true but B is false

(D) A is false but B is true

45. Consider the following statements.

A: A warm airmass moving over a cold surface experiences convective instability.

B: There would be an inversion of temperature in the warm air mass.

The answer is

(A) Both A and B are true, and B is the correct explanation of A

(B) Both A and B are true, but B is not a correct explanation of A

(C) A is true but B is false

(D) A is false but B is true

46. Consider the following statements.

A: Energy in the atmosphere is also transferred by horizontal movements

B: Vertical energy budget in atmosphere varies considerably over the globe

The answer is

(A) Both A and B are true, and B is the correct explanation of A

(B) Both A and B are true, but B is not a correct explanation of A

(C) A is true but B is false

(D) A is false but B is true

47. With reference to Lightning, consider the following statements:

- a) Collisions between smaller ice crystals and larger ones in the clouds generate the electric sparks.
- b) The difference in electrical charge between the top and bottom of a cloud, results in lighting.
- c) The Earth is a good conductor of electricity.

Which of the statements given above are correct?

- (A) a only
- (B) a and b only
- (C) b and c only
- (D) all are correct.

48. Which of the following statements in the context of northern hemisphere is/are correct?

- a) Vernal equinox occurs on March 21.
- b) Summer solstice occurs on December 22.
- c) Autumnal equinox occurs on September 23.
- d) Winter solstice occurs on June 21.

The correct answer is

- (A) a only
- (B) a and c only
- (C) b and d only
- (D) All are correct

49. Consider the following statements-

- A: The temperature of the ocean bottom is uniform from the equator towards the poles.
- B: The rate of decrease of temperature with increasing depth is more rapid near the equator than towards poles.

The right answer is

- (A) Both A and B are true, and B is the correct explanation of A
- ☒ (B) Both A and B are true, but B is not a correct explanation of A
- (C) A is true but B is false
- (D) A is false but B is true

50. Read the following statements.

A: Cold currents transfer the cold water from the tropics towards the poles and warm currents the warm water from the Polar Regions towards the tropics.

B: The ocean currents help in the maintenance of latitudinal heat balance.

The right statement is -

(A) Both A and B are true, and B is the correct explanation of A

(B) Both A and B are true, but B is not a correct explanation of A

(C) A is true but B is false

(D) A is false but B is true

51. The impact of cyclones and tsunamis in India could be reduced by

a) Presence of tropical deciduous forest

b) Presence of tropical thorny and scrubs forest

c) Presence of mangrove forests

d) Presence of montane forest

(A) Only statement a is correct

(B) Statements a and b are correct

(C) Statement c is correct

(D) All statements are correct

52. The method of mapping depends on the

(A) Size of the area

(B) Degree of accuracy aimed at

(C) Amount of details required

(D) All of the above

53. Consider the correct option for the clarification of map projection based on source of light.

a. Gnomonic

b. Orthographic

c. Zenithal

d. Stereographic.

Answers:

(A) Only a

(B) a, b and d

(C) only c

(D) all of the above

54. Which among is/are the example of source of energy in active remote sensing process.
- a. Laser
  - b. Synthetic Aperture Radar
  - c. Lidar
  - d. Sun rays

Answers:

- (A) Only d
- (B) Only b
- (C) a, b and c
- (D) All of the above

55. Considering the LISS III Sensor image which of the following statements are correct?
- a. 23 Meter Spatial Resolution
  - b. 4 Numbers of Bands
  - c. 8 bit Radiometric resolution.
  - d. 8 Days Temporal resolution.

Answers

- (A) Only a, b and c
- (B) Only c
- (C) Only d
- (D) a and b

56. Among the scales of measurements while framing a questionnaire one of the measurement scales does not involve any numerical value; the scale is

- (A) Nominal
- (B) Ordinal
- (C) Interval
- (D) Ratio

57. In time and resource constraint situations, which of the following approach would help to find a close figure on the level of poverty and multidimensional deprivation in a village having about 200 households?

- (A) Visit the village headman
- (B) Visit the village panchayat office
- (C) A systematic sample survey of the households
- (D) A visit to the nearest the block development office

58. To measure the outcome of ICDS services on Infant Mortality Rate in few villages which statistical methods would be appropriate

- (A) Correlation (B) Gini Coefficient  
(C) Regression analysis (D) Geometric mean

59. One of the demerits of quantitative methods is we may lose sight on an individual observation and miss certain specific components of the observation due to the use of group average or generalisation. This demerit can be appropriately addressed by

- a) Addressing sampling error  
b) Complementing with qualitative approaches of study  
c) Adopting alternate statistical measures

- (A) Only through a (B) Only through b  
(C) Only through c (D) All the three approaches will be required

60. Friedrich Ratzel is the author of 'Anthropogeographie'.

- A. The book considered population distribution, its relation to migration and environment, and the effects of environment on individuals and societies.  
B. Ratzel's interest in tribes, races and nations and fieldwork had helped to coin the term 'anthropogeography'.

- (A) Only statement A is true (B) Only statement B is true  
(C) Both the statements are true (D) Both the statements are wrong
